

thinkingcap Reporting

The Thinkingcap Reporting toolkit integrates with applications built upon the Thinkingcap platform, enabling powerful data analysis and high quality report generation. Thinkingcap Reporting connects to any external database via JDBC/ODBC, and can operate seamlessly across multiple systems, driving business integration while maintaining support for legacy applications.

KEY FEATURES

Powerful visualisation, discovery and analysis of business data

Reports can be generated on demand by web service requests, or interactively via a web browser. Standard reports can be generated automatically (eg end-of-month)

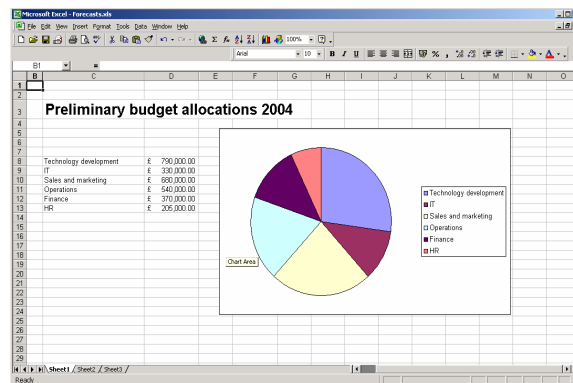

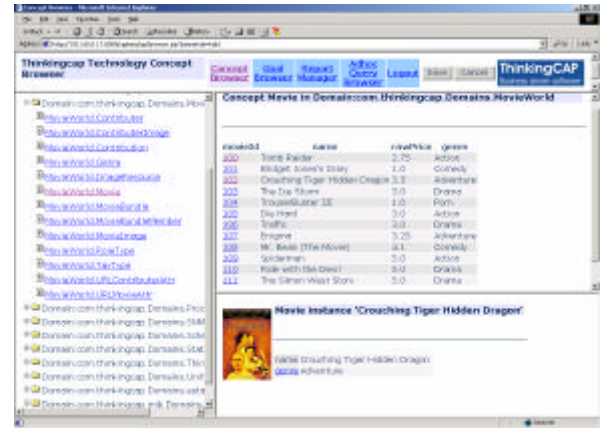

Output formats include:

- PDF for high-quality printing
- html for intranet distribution
- Excel for further analysis

Thinkingcap Reporting spans multiple data sources – ideal for reporting across several diverse systems

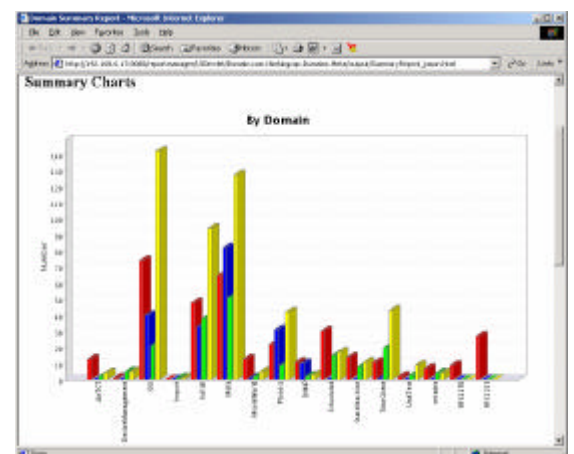

Reports are customisable by content, calculation and presentation

Thinkingcap Reporting offers a rapid solution to bespoke reporting needs. It is web-enabled, offering a familiar, easy to learn interface and making it easy to share reports via a company intranet.

Thinkingcap reporting makes reporting available to the whole enterprise, offering high volume and high availability. It can run on both unix and windows platforms, and integrates with all major databases.

The Thinkingcap platform includes supporting facilities to identify data errors and discrepancies, clean up dirty data, and migrate data from one system to another.
